## COMP4336/9336 Mobile Data Networking

# I程:原相域io写d结n做izalioS编r程n辅导

# **Objectives**

- 1. To install the fre urce Wireshark tool in your laptop
  - To learn the bas

### Wireshark overview

Wireshark [https://www.users.worldwide. It is freely available to download for both Windows and MAC platforms, as well as Linux/Unix. Wireshark can be used to capture WiFi packets and inspect the wireless (radio) related aspects of data transmission, such as received signal strength, data rate of the transmission, and so on. This feture platforms is compensationally use Coopen buriffeed tanding of many wireless and mobile data communication protocols and the fundamental theories behind them through hands-on experiments. Figure 1 shows a screen shot of Wireshark displaying some packet capture from WiFi and their radio related information signment Project Exam Help

Wireshark is a stable software with extensive on-line support, including

- user guide [https://www.wireshark.org/docs/wsug\_html-chunked/],
- manual pages [https://www.wiresbankorg.coos/wsug that chubled/],
- a detailed FAQ [https://www.wireshark.org/faq.html], and
- numerous YouTube videos posted by Wireshark experts and enthusiasts

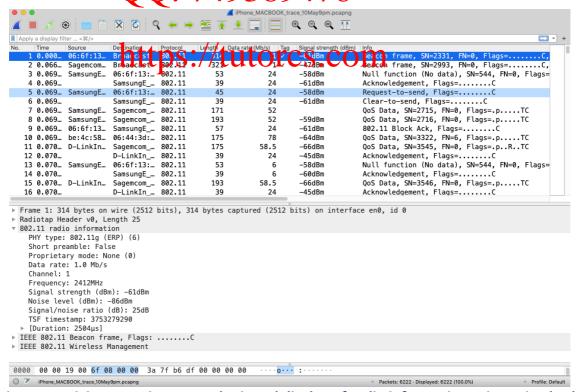

Figure 1. WiFi capture in MacBook Air and display of radio information using Wireshark.

#### **Your Tasks**

- 1. Download and initial the rection available Wintstark in Superficient [https://www.wireshark.org/download.html]. To have full access to Wireshark features, you may need to install it as administrator/root user. Windows users also need to install Microsoft Netw au/download/d which is necessary to capture WiFi packets
- 2. By consulting the per guide, and tutorials, learn some of the important features of Wire
  - Capture live Fi interface of your laptop
  - Display pacl dinformation, such as received signal strength, data rate, WiFi beacon interval, etc.
  - Save captured packet trace into a file in different formats, such as pcap, and csv (pcap allows you to import the file into Wireshark for virtual inspection, while csv allows you to import the data to tools such as Excel/Matlab/Python for statistical analysis and processing of the data)
  - Import previously captured packet traces captured by Wireshark or other packet dump programs (e.g., Miscosoft Network Manitor) from Effection Wratari Help
  - Filter packets based on some criteria, such as display all WiFi packets transmitted from a particular WiFi access point
  - Colorize packet pity based putitiers CS @ 163.com
  - Create various *statistics*
  - Anything else that you find interesting ...

QQ: 749389476

Completing of these tasks will set you up for the next set of labs and the term project, which will make use of wireless packet captures and analysis.
